Task # 05

Task: Wazuh Integration with n8n and Use Case Implementation

Objective:
The purpose of this task is to integrate Wazuh with n8n and implement an automated alert-handling workflow.

Requirements:

1. **Wazuh Integration with n8n**
   - Configure integration between Wazuh and n8n using webhooks so that security alerts generated by Wazuh can be automatically sent to n8n workflows.

2. **Use Case Implementation**
   - Each group member must design and implement one unique use case in n8n.
     The workflow should:
   - Receive alerts from Wazuh through a Webhook.
   - Process the alert within n8n.
   - Forward the alert to one or more communication channels such as Email, Slack, or other notification platforms.

3. **Uniqueness Requirement**
   - The use case implemented by each group member must be unique.
   - Duplicate use cases will not be accepted.
   - If two or more members submit the same use case, the task will be considered incomplete for those members.

Deliverables:
- Working Wazuh–n8n integration using Webhooks.
- A demonstrated unique use case workflow implemented in n8n.
- Evidence of alerts being successfully sent from Wazuh to communication channels.
